About me

I am a developer and that lives in Copenhagen. I have a huge passion for my craft. In 2011 I discovered that it's possible to develop mods for Minecraft. From that day I was hooked on software. Though for the majority of my life I have been obsessed with technology. After some years I got my eyes on business-programming. There I decided to start an education as datatechnician with special in programming on TEC. That education was not for me so I started on HF so I could start on computer science on CPHBusiness. I am happy I did that. I am very dedicated to software development and I am very interested in bigger projects and team collaboration. I value my social life, and when I don't write code, I use my time on friends and family.

Work experience

Lederne `Next.js` `React` `Sitecore`

2024 - now

Frontend Developer

Developing software for more than 100.000 members with a great team of talented individuals. I have been a part of releasing Lederne's new and updated website.
